# THE PROBLEM

The traditional architecture was based on large-scale generation; centralized, one-way control; and passive loads.

## SAY GOODBYE TO TRADITIONAL POWER

### Outdated

Many of the electric transmission grids in service were built more than a half century ago. Fundamental changes in electricity generation and use are requiring the electricity system to perform in ways for which it was not designed—requiring new capabilities and system designs to maintain historical levels of reliability.

### Harmful

Environmental effects from coal and natural gas based power plants can affect human health. Particularly as pollutants in air, water, or soil.

### Expensive

Due to the fact that fossil fuels are finite, the cost of using traditional power continues to rise. This coupled with an ever aging grid results in annual rate increases passed on to homeowners.

# THE SOLUTION

---

## Fully Funded

No cost for homeowners

\$0 Upfront Installation Costs

## POWER SYSTEM OF THE FUTURE

### Simplicity

The ease of the installation allows to take advantage of both vertical and horizontal spaces with no specific use.

### Environmentally Conscious

Traditional power has negative environmental effects from the coal and natural gases combusted during production. Solar offers the power that is harnessed from the sun.

### Federal Solar Tax Credit (ITC)

Any newly installed solar energy system can be exempt from your property tax assessment value. With the ITC you can deduct up to 26% of the cost of your solar energy system from your federal taxes.

### Off Grid

Solar power works independently and does not rely on the grid. Solar system allows to generate enough power that can be stored and used at night or when the power grid is down.

### Welcome to Renew Energy!

Our Solar Experts are hard at work to ensure you get the most highly optimized solar financial solution custom fit to your needs.

### Project Manager Introduction

Your Project Manager will call to introduce themselves and fill you in on a projected installation date.

### Site Survey

Homeowner or person 18 years or older needs to be home to give our site tech access to the roof and attic.

## Permit Submission

We take care of all permits and submit them to your local municipality.

## Inspection

Your project manager will notify you if you need to be present for the inspection.

## Design Approval

Your project manager is going to reach out via text and email to confirm the final layout of your system.

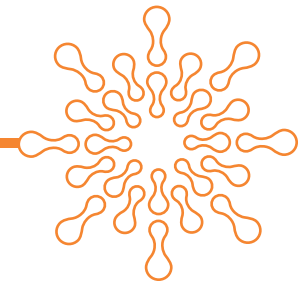

## Installation

You're almost there! Today is the day we install your panels.

## Permission to Operate

It's time to turn your solar system on!

# FAQ

---

## Why Renew Energy?

At Renew Energy, our goal is to help provide you the best solar experience. From our first contact, to install, to power up; every step of the process is guided by our professionals and our dedicated partners. Our industry experts truly care about you and the value that we can provide for your family. With multiple programs and financing options, we are confident we can provide a valuable experience to you.

## How much does Solar cost?

There are many misconceptions about large out of pocket costs for solar. Our experts will help guide you to a solar solution for your home with no out of pocket cost.

## How much money will I save?

There are many factors that determine your savings, including the size of your roof, the amount of annual sun exposure, shading, roof condition, and annual power consumption. Our expert consultants will work with you to determine which route of going solar will provide you the best savings.

## What happens if I move?

All of our solar programs are completely transferable. There are many studies showing that installing solar can be a significant increase in your home's value. We've had the pleasure of assisting many customers when they sell their home.

## What if my panels malfunction or break?

We've got you covered. Renew Energy offers the best warranties and power production guarantees available in the industry. You never have to worry about out of pocket maintenance costs.

# COMMITMENT TO SERVICE

---

## **Our Mission:**

To provide fair and honest pricing, fully disclosing all costs to our customers while providing the best customer service in the solar industry. We will always put our integrity before a sale and treat all of our clients with the courtesy and respect we expect for ourselves.

**The sooner you go solar  
the more you could save**
